Rebooting the Ocean Ecosystem

An Integrated Concept for Ocean Recovery

Three Integrated Actions

1. Marine Microplastic Removal

- Recover microplastics from surface and shallow seawater using MA Vessels.

2. Ocean Alkalinity Enhancement

- Enhance seawater alkalinity through controlled lime treatment.

3. TRWP Reduction

- Reduce TRWP pollution through vehicle, roadside, and drainage measures.

Objective

- Restore marine environmental health and support the ocean's natural carbon uptake capacity through integrated marine and land-based actions.

Next Steps

- Scientific validation, pilot testing, and international cooperation.
- *Concept proposal – further technical and environmental validation required.*
